

The image shows two large, black, ribbed Uponor Infra tanks in a rural landscape. The tanks are made of polyethylene and are designed for storing water. They are positioned in a field with green vegetation and a blue sky in the background. The tanks are connected to a network of pipes and have a central access point on top. The overall scene is bright and clear, suggesting a sunny day.

Uponor Infra tanks

Multi-purpose tanks for drinking water, storm water and sewage of agricultural origin

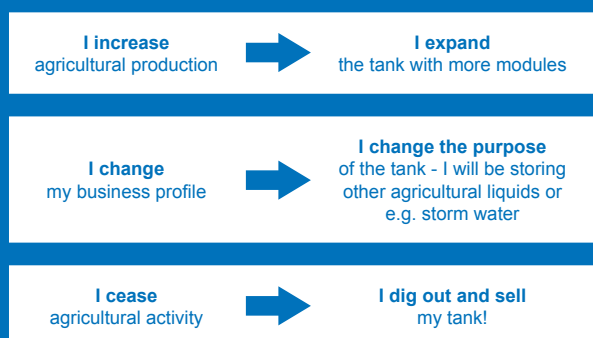

Durable, leak-proof and economical

Uponor Infra tanks are designed for storing potable water, water for fire-fighting, storm water, sewage of agricultural origin (liquid manure, silage juices, fertilizers) and other liquids. They are made of polyethylene, double-walled Weholite pipe and meet all the environmental requirements. The tanks provide absolute leak tightness and increased resistance to frost due to double wall. They are offered in capacities ranging from 10 m³. Each tank is tailor-made according to the customer's specific demands and needs. A typical Uponor tank is a single-body structure, but it is also possible to join tanks into batteries of any capacity. Tanks can be installed in different types of ground.

Advantages of tanks:

- Double walls guarantee reliability and 100% leak-free operation
- Long-term durability - over 100 years
- Absolute resistance to corrosion including corrosive sewage
- Full resistance to UV radiation
- Easy and quick assembly, also in winter conditions
- Possibility to join tanks into batteries to increase their capacity
- Possibility of foundation in any soil and the use of space above the installation
- Can be used in road lanes and underneath parking lots
- Ready for use immediately after installation
- Possibility of recycling

Solution for the future:

When increasing production agricultural tank can be expanded with additional modules. The purpose of the tank can be changed even after years of use. The tanks are made of polyethylene, which is why deposits do not stick to the walls – you can easily clean it and use it for its new purpose. It is possible to disassemble the tank, which allows you to change the place of foundation or resale.
